

Enable TouchScreen KeyBoard in FireFox

source: [How to Display On-Screen Keyboard in Mozilla Firefox \(trishtech.com\)](https://www.trishtech.com/how-to-display-on-screen-keyboard-in-mozilla-firefox/)

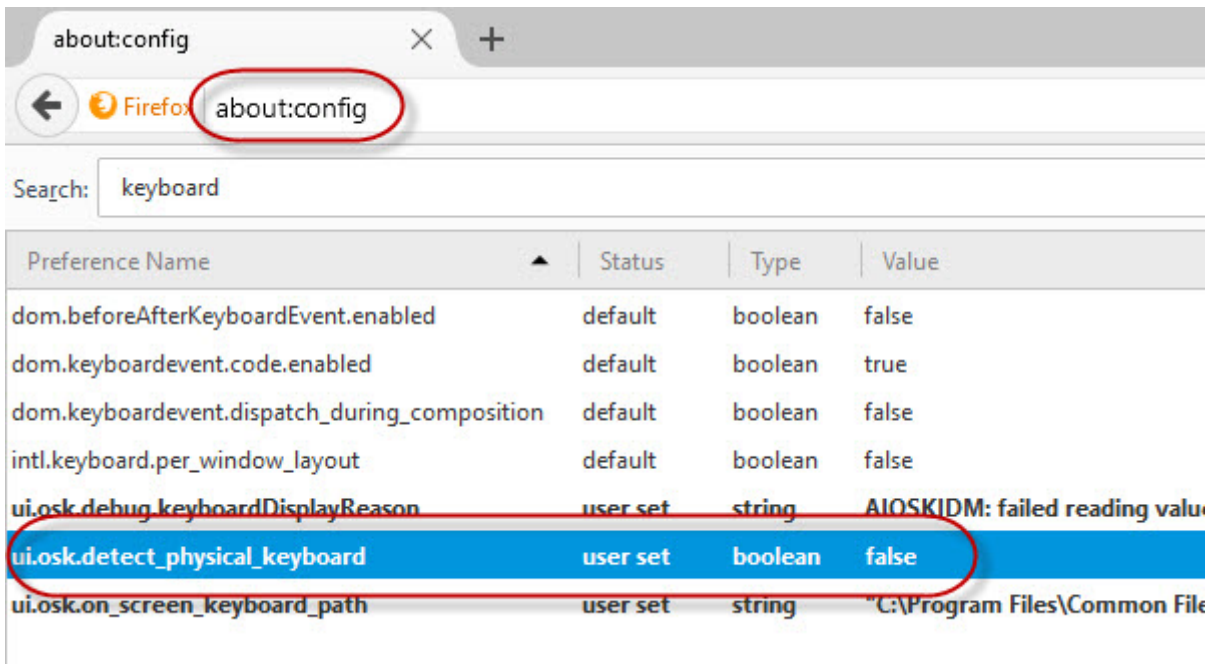

Enabling this setting is useful for our Touchscreen enabled GraceLink CheckIn stations:

- First Go into the settings App in Windows. On Windows 10, Navigate to Devices, Typing.
- Enable "Show the touch keyboard when not in tablet mode and there's no keyboard attached" setting.

- Now Open Firefox
- enter in the address field *about:config*

- search for *detect* or *keyboard*. You will need to change the `ui.osk.detect_physical_keyboard` config to ***false***.

- Restart Firefox and the onscreen Keyboard should show up when you tap on a text field in FireFox.
